
1 CONSUMPTION LAYER
Channels through which users and systems access enterprise AI capabilities.
User Interactions
M365 Copilot
MS Teams
Web/Desktop App
Event Interactions
Digital Twin Access
Azure Logic Apps
Receiving Change Requests
Apache Kafka
External MCP Invocations
2 IDENTITY & SECURITY LAYER
Enforces secure identity, access control and policy adherence.
Microsoft Entra ID (Azure AD)
Single sign-on (SSO)
OpenID Connect (OIDC)
On-Behalf-Of (OBO flow)
Conditional access & policies
Entitlement and Groups
Agent 365 / OSS (Solo.io)
3 ORCHESTRATION LAYER
Coordinates AI reasoning, skills to constructs workflows while maintaining registry of agent parts.
Intent Parsing Engine
Multi-Agent Orchestration
Enterprise Agent Access Layer
(Gateway + Registry Abstraction)
Agent Gateway
Agents Registry
Tools Registry
Skills Registry
Workflow Engine
Enterprise Agents
Pro-code Agents
Microsoft agent framework
Domain Agents
Enterprise agent registry would store the blueprint for all enterprise agents. agentregistry can be considered for this purpose
[Registered and discovered through Registry]
[Invoked through Gateway]
4 UNIFIED CONTEXT AND MEMORY FABRIC
Provides contextual knowledge, memory and semantic understanding to power efficient AI orchestration
WorkIQ
MS Office documents
Email, Calendar
SharePoint
Context and Conversational State management
Persistent conversation history
Short-lived active context cache
Attached artifacts
Business Rules
Glossary (e.g. Acronym)
Ontology
Taxonomy
Foundry IQ
Hybrid GraphRAG
Vector search
Relevant documents
Knowledge Graph
Relationships, Dependencies, Ownership, Governance
RDF-OWL-SPARQL
Human Action
Hand off to live agent
Requests which needs approval e.g. sharepoint access
5 INTEGRATION & MCP LAYER
Provides standardised connectivity, automation and event-driven integration between tools and AI agents.
MCP Servers (Standardized via MCP protocols)
ServiceNow
Adobe
Lens
SuccessFactor (SAP)
Dynamic 365
Mercury (Finance)
nexthink
docusign
Azure Logic Apps (Shared Enterprise Services)
Workflow, Shared Notifications, Approvals & Automation
INTEGRATION PATTERNS
Web-Hooks
APIs / Connectors
Events / Notifications
Long-running jobs
Event bus - Kafka
6 ENTERPRISE PLATFORMS & DATA SOURCES
Enterprise systems and business applications that provide operational data and domain knowledge
Line of Business Platforms
ServiceNow
Adobe
Lens
SuccessFactor (SAP)
Mercury (Finance)
Standalone Data Sources
- SQL DB
- SAP S/4 Hana Tables
- Data warehouse/lake
- Other enterprise data
Business Logic / Artifacts
Work-arounds and ad-hoc comms
Leveraged by product owners during failures
7 GOVERNANCE & OPS LAYER
Observability, quality and control knobs
Observability & Feedback loop
Monitoring
Tracing
Evaluation
Quality & Safety
Feedback collection
Continuous improvement
Telemetry from orchestrator, MCP tools, Power automate and platforms
OpenTelemetry -> Prometheus -> Grafana
Administrators
Own observability, evaluation, monitoring, tracing, quality and operational oversight. Ensure reliability, compliance and continuous improvement
KEY FLOWS
User/Data Flow
Queries, responses and data exchanged
Authentication Flow
User authentication via Entra ID, OBO token used across layers
Event/Notification Flow
Events, alerts, feedback and job status updates
